SUMMARY

Data Analyst with experience in operational analytics and KPI reporting, holding an M.S. in Data Science (GPA 4.0). Expert in transforming large-scale, multi-source data into actionable insights, driving business decisions, optimizing performance, and improving user engagement through A/B testing and data analysis.

EDUCATION

Colorado School of Mines	Golden, CO
Master of Science in Data Science(GPA:4.0)	Aug 2024 – May 2026
Shanghai Ocean University	Shanghai, China
Bachelor of Management in Management Information Systems	Aug 2011 – June 2015

SKILLS

- **Marketing Related:** A/B Test, Google Analytics, Salesforce, CRM, Conversion Lift Testing, Marketing Mix Modeling
- **Analysis & Visualization:** Python (NumPy, pandas, Seaborn, scikit-learn, spaCy), R, Tableau, Power BI, Looker Studio
- **Database:** Snowflake, Big Query, AWS (EC2, Glue, S3), Oracle SQL, Microsoft Azure, MongoDB, Apache Airflow
- **Statistics & Machine Learning:** Hypothesis Testing, Naive Bayes, Causal Inference, Linear Regression, Logistic Regression, NLP, Sentiment Analysis, Time Series, Advanced Tree Models (RF, XGBoost), Neural Networks (CNN, RNN/LSTM), Cluster

PROFESSIONAL EXPERIENCE

Administrative Examination and Approval Bureau	Chengdu, China
<i>Data Analyst</i>	Nov 2015 – Jun 2024

- Utilized **Python and PySpark** to process **1M+** multi-channel citizen service records (hotline, web, WeChat), addressing missing values via **K-means imputation** and standardizing timestamps; applied **Isolation Forest** to detect anomalies in inquiry spikes, enabling proactive FAQ strategies that reduced weekly inquiries by **75%** and improved service efficiency.
- Queried and analyzed 300K+ monthly service records using **MySQL**, extracting features such as handling time, transfer rate, and satisfaction score; applied **time-series and variance analysis** to identify bottlenecks, optimizing queries with joins, CTEs, and partition pruning, reducing refresh time by **90%** and enabling faster operational interventions.
- Built **Tableau dashboards** to monitor KPIs including resolution time, online completion rate, and departmental performance; conducted **trend and segmentation analysis** to identify high-burden departments, developing **resource allocation strategies**, enhancing drill-down capabilities, improving reporting efficiency by **70%** for 44 government departments.
- Designed and executed **A/B testing** on FAQ release timing (12:00 vs 18:00) across WeChat channels; monitored engagement rate and comment volume, applied statistical significance testing, identifying optimal timing that increased engagement by **150%** and reduced inquiry load, informing communication and **service strategy optimization**.
- **Automated personalized email reporting** using **Python and cron scheduling**, generating Excel reports with insights on inquiry trends, departmental performance, and SLA metrics; built reusable KPI functions, ensuring consistency and improving timely decision-making for **cross-department operations, resource planning, and service quality management**.

Auxxit	remote, USA
<i>Data Analyst Intern</i>	May 2025 – July 2025

- Decomposed the end-to-end auction funnel into engagement, bidding, and winning stages, and built a **logistic regression-based conversion model** to quantify stage-level drop-off drivers; identified primary bottleneck and improved overall auction conversion from **18% to 21%** through targeted product optimizations and funnel interventions.
- Built **SQL-based analysis pipelines** on 20K+ user events and 3K+ weekly transactions to evaluate behavioral drivers across user segments; identified key engagement signals correlated with bidding activity and **partnered with Product and Growth teams** to design user activation strategies that increased bidding intent.
- Developed a **real-time Power BI dashboard** tracking GMV, active auctions, and bidder participation rate; implemented **cohort-based filtering** and **drill-down views** by category/time window, enabling stakeholders to identify underperforming auctions early and reducing weekly reporting turnaround time from **4 hours to 1 hour**.
- Analyzed early lifecycle drop-off patterns using **funnel cohort analysis**, revealing that most user abandonment occurred before first bid initiation; findings informed onboarding flow and auction-entry redesign, contributing to a **2%** increase in bidder participation through **improved first-action conversion**.

Colorado School of Mines	Golden, USA
<i>Social Media Assistant (LinkedIn Analytics & Content Strategy)</i>	Jul 2025 – Present

- Built **SQL pipelines** to analyze LinkedIn engagement metrics (impressions, CTR), identifying high-performing content themes and optimal posting times; informed **content prioritization and scheduling strategies**, growing followers from **0 to 275+**.
- Developed **Power BI dashboards** tracking reach, and search appearances; uncovered mobile usage trends and optimized content structure and visual formats, driving **content optimization strategies** that increased impressions from **200 to 600**.

<i>Teaching Assistant– Introduction to Machine Learning</i>	Aug 2025 – Dec 2025
---	---------------------

- Analyzed recurring student challenges in **preprocessing, feature engineering, and overfitting**, identifying common failure patterns and improving support efficiency by reducing repeated debugging requests.
